                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment
                                                                                                                                                                                                                                                                                                                                    Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases - \,

Sequences AAS31827-AAS32182 represent genomic DNA molecules, which encode the liver associated polypeptides of the invention. Liver associated polypeptides and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in equinoparious condition of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a liver associated polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as corneal infection, encourant disorders such as corneal infection, encourant disorders such as corneal infection, and ciscaders such as corneal infection, encourant disorders such as corneal infection, encourant disorders such as corneal infection, encourant disorders such as crown's disease, renal disorders such as solumer as also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                           Isolated nucleic acid molecule encoding a human liver related protein is used in preventing, treating or ameliorating disorders of the liver particularly cancer of the liver -

The invention relates to 145 novel human liver antigens (ABP40831-ABP40975) and to cDNAs encoding them (ABN90036-ABN90180), and also encompasses polypeptides 90% identical and polypucleotides 95% identical comprision additionally relates to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human liver antigen

CC polynucleotides, antibodies against human liver antigens, and the use of liver antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various disorders of the liver. Such conditions (c.g., clonorchis sinenis, Echinococcus granulosus and confidential infections (e.g., cytomegalovirus, Epstein-Barr virus, hepatitis A virus, hepatitis B virus and hepatitis C virus), parasitic infections (e.g., clonorchis sinenis, Echinococcus granulosus and cisorders that may be treated include inflammatory conditions (e.g., cirrhosis and granulomatous hepatitis), damage caused by drugs or toxins, autoimmune diseases (e.g., Wilson's disease, primary biliary cirrhosis, carcinoma), portal hypertension, or gastrointestinal disorders (e.g., poptic ulcers, gastritis and peritoneal diseases). Liver antigen compounds which modulate liver antigen expression or activity. The polypeptides may further be used for gene therapy, chromosome compounds which modulate liver antigen expression or activity. The phenotyphing, sequences ABN90182-ABN90537 represent human liver antigen comming comming expression or prepare antibodies useful in disease diagnosis, drug targeting and comming expression or activity concerned and penipones.

                                                 The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                CAATCCTCCTGCCTTGGCCTCCCAAAGTGTTGGGA-TACAGTCATGAGCCACTGCATCTG

/note="Organ: blood; Vector: Lambda ZAP II; Site_1: ECORI; Site_2: ECORI; 65,000 proliferating erythroid cells from the buffy coat of a blood donation were obtained by flow cytometric separation after a 5-day culture period in the presence of erythropoietin. Total RNA was purified from the sorted cell population using TRIZOI reagent. RNA (0.3 ug) was converted into double stranded cDNA using Clontech's CapFinder cDNA Library Construction Kit (Clontech) according to the manutacturer's protocol and cloned into ECORI digested Lambda Zap II vector (Stratagene). The phage library was amplified once prior to in vivo excision in SOLR cells. Individual colonies were grown, and the CDNA inserts were sequenced in high thtp://www.nisc.nih.gov/)."

Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT713-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  301 CATAACCT -- TGTCTCTACTAAAAGTGCAAAGATCGGCCAGGAGTGATGGCACATGTCT 357
                                CDNA Library preparation: Dr. M. Bento Soares, University of lowa CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa Clone Distribution: Clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov The following repetitive elements were found in this CDNA sequence: 11-168, >ALU (matched compliment) 199-418, >ALU 334-623, >ALU 634-661, >AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

polylinker; Site_1: ECOR 1; Site_2: NOt 1; NCI_CGAP_FS1 is
a cDNA library containing the following tissue(s):
Fibrosarcoma Cell line HT-1088 (ATCC number CCL-121). The
library was constructed according to Bonaldo, Lennon and
Soares, Genome Research, 6:791-806, 1996. First strand
cDNA synthesis was primed with an oligo-dT primer
containing a Not I site. Double stranded cDNA was ligated
to an EcoR I adaptor, digested with Not I, and cloned
directionally into pT773-Pac vector. The oligonucleotide
used to prime the synthesis of first-strand cDNA contains
a library tag sequence that is located between the Not I

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence 15, P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ģ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           47; Gaps
                                                           Sequence 9, Application US/08367841A
Patent No. 6319687
GENERAL INFORMATION:
APPLICANT: Chader, Gerald J.; Rodriguez,
APPLICANT: Tombran-Tink, Joyce
TITLE OF INVENTION: PIGMENT EPITHELIUM
TITLE OF INVENTION: DERIVED FACTOR: CHARACTERIZATION GENOMIC
TITLE OF INVENTION: ORGANIZATION AND SEQUENCE OF THE PEDF GENE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 4; Length 4421;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fragment Derived from human placental genomic DNA; Also referred to as JT101
